

# Sanitation and Washing Hands

---

- Modified freeze tag game.
- Start by teaching students the proper way to wash their hands (procedure, time, etc.).
- Then select a few students to be “germs.” When the germs tag other students, those students must leaving the playing area to a “hand washing” station and practice. Once they finish, they can re-enter the game.
- A similar game can be made for other health topics (ie. brushing teeth).

# Historical Route

---

- Decide what places your class would like to learn about and visit (collaborate with other teachers in other subjects).
- Plot a course using Google Maps or ActiveGlobe, including historical stopping points. You can also use Google Street View.
- Track your classes progress, providing information when each stopping point is visited.

# Animals - Icebreaker

---

- Students start in a circle formation.
- The person who is pointed to will act out the middle animal and the students immediately to their right and left will complete the animal. The example for Moose: middle person makes a long snout and the other students form the antlers.
- If the students forming the animal take too long or make a mistake, one of them replaces the student in the middle of the circle (who points to students and calls out the animal).
- Once students played the game, have the students create their own animal shapes that can be added into the game along with 2 interesting facts about their animal.
